LETTER OF CERTIFICATION – No.1160

HAND HELD TEST KIT CALIBRATION

The hand held test kit does not require periodic calibration.

During manufacturing, the test kit is calibrated and tested with calibrated factory test equipment.

During subsequent operations, the microprocessor is designed with the power-up “self check” sequence. Each time the unit is powered up, it does a self-diagnostic. This checks the health of all electronics, as well as all connections to the trip unit.

Error Message Indication: An error message is indicated by all LEDs lighting at once. If an error message is displayed during Hand-Held Test Kit operation, check all connections then refer to Table 1 and troubleshooting section of the instruction bulletin.

NOTE: There are no repairable internal parts for the Hand-Held Test Kit. Housing should only be opened to install or replace batteries.

Letters of Certification are based upon present construction of the specific product, for which certification has been requested and should be relied upon solely in connection therewith. Changes in design and/or manufacture, which may not be apparent from appearance or catalog number or other designation, may cause other versions of this product to not meet this certification.

A handwritten signature in black ink that reads "Marshall Barker". The signature is written in a cursive style with a large, sweeping "M" and "B".
