

NetShelter CX Fan Booster Switch

Customers will find additional Fan Booster Switches inside the NetShelter CX cabinet, one on each fan module. The Fan Booster Switch allows the Standard fan speed to be increased. The cabinet ships with the switch set to the Standard Speed (left). Airflow measurement information on all current documents is derived from Standard fan speed setting. There is no additional data available regarding airflow or cooling when the fan is in set to the Booster speed setting. As additional data related to the Fan Booster Switch is made available we will update all documents.
