

# AR7725 Duct Kit Spacing

Richard Phillips

16 April 2015

## 2U Duct Kit Installed in a 1070MM deep rack.

Distance between the rear mounting rail and the rear of the duct kit.

23.71

24.83

Minimum distance between mounting rails with the duct kit installed. Depending on Interferences it might be possible to reduce this by 1/4".

Overall depth of the assembled duct kit.

Note: the duct kit needs to be mounted below the chamfered flange on the mounting rail. This will help minimize the overall distance between the front and rear mounting rails.
