

# PowerChute Business Edition v9.0.1 to v9.2.1 displays Linux RPM package public key error

This Knowledge Base article outlines the steps required to resolve the warning message showed when installing PowerChute Business Edition versions 9.0.1 to v9.2.1 using `rpm` on Linux.

When installing PowerChute Business Edition versions 9.0.1 to v9.2.1 using `rpm`, you may see a warning about a key alike the following:

```
warning: pbeagent-XXX-XXX.XXXX.rpm: Header V4 DSA signature: NOKEY,
Key ID bb 271b 8a
```

PowerChute Business Edition's RPM package for Linux is signed by the GNU Privacy Guard (GPG). If GPG's public key is not installed, the above warning message will be shown when installing the PowerChute Agent. In order to prevent this warning from appearing, please install the public key on your system.

## About the Key

|                     |  |
|---------------------|--|
| Name                | PowerChute Business Edition v8.5.0 Public Security Key for Linux RPM         |
| Summary information | American Power Conversion (PowerChute Business Edition)<br><support@apc.com> |

## Download the Key

Download the public key from the following URL and save it in an arbitrary folder.

<ftp://ftp.apcc.com/apc/public/software/unix/linux/pcbe/850/RPM-GPG-KEY-PCBE>

## Install the Key

Follow the steps detailed below to install the public key using `rpm` commands. These commands must be executed by the root user.

1. Import the public key into the RPM database:  

```
rpm --import RPM - GPG - KEY - PCBE
```
2. Execute the following command to check if the public key has been installed:  

```
rpm -qa gpg-pubkey\* --qf "%{name}-%{version}-%{release}-
%{summary}\n"
```

If the following output is shown, installation was successful:

```
gpg-pubkey-bb271b8a-4a2fd040 -> gpg (American Power Conversion
(PowerChute Business Edition) <support@apc.com>)
```

3. Verify the signature of the RPM package:  

```
rpm --checksig pbeagent*.rpm
```

The resulting output should be:

```
pbeagent-XXX-XXX.XXXX.rpm: (sha1) dsa sha1 md5 gpg OK
```

## Notes:

- If you saved the public key to a text file on a Windows machine, delete the Ctrl-M (^M) character.
- Even if a warning is shown, PowerChute Business Edition installation was successful.
