

Can vertical cable managers be installed inside of the finger style cable managers, like AR7580A, AR7585 or AR7588? If so, what options are there?

Our vertical finger style cable managers have two rows of fingers.

- If the inside set of cable fingers is removed there's room to add an accessory mounting rail, onto which additional cable management can be installed.

All the following illustrations show an AR3X57 cabinet and AR7588 vertical cable manager. The cable managers installed inside the AR7588 are either AR7540, AR8621 or AR8442.

Bottom-Up View of Cable Fingers with One Accessory Mounting Rail Installed, and AR8442

The mounting rail and accessory rail are pushed all the way forward.

AR7588 (fingers removed on one side), with AR8442 installed (both positions shown)

Front View of Cable Fingers with One Accessory Mounting Rail Installed, and AR8442

The mounting rail and accessory rail are pushed all the way forward.

AR7588 (fingers removed on one side), with **AR8442** installed (both positions shown)

Interior View of Cable Fingers with One Accessory Mounting Rail Installed, and AR7540 (1st orientation)

The mounting rail and accessory rail are pushed all the way forward.

AR7588 (fingers removed on one side), with AR7540 installed. 1st Orientation.

* This orientation can only be used in certain places on the accessory rail.

See pic (sorry if it is hard to see)

Top-Down View of Cable Fingers with One Accessory Mounting Rail Installed, and AR7540 (1st orientation)

Inside View of Cable Fingers with One Accessory Mounting Rail Installed, and AR7540 (2nd orientation)

AR7588 (fingers removed on one side), with AR7540 installed. 2nd Orientation

*AR7540 protrudes into the gap between the fingers of AR7588. Vertical mounting rail needed to be moved .5" back from its furthest forward position to clear.
